# Getting Started

Let's say "Hello World…"

## 1st Step: Select the folder
just-the-theme or with-style-selector?

After extract Metroid from zip file you should choose onde folder to use. Both are prepared to display your site normally. The difference between them is that in the former, you need to choose the color and the background texture of your theme, on second case, you can simply choose the start color scheme, and after it opened, the user will define his favorite scheme using the style selector.

## 2nd Step: Your informations
Let's enter your informations!

Open the "index.html" file. Each section of metroid is organized and commented to better understanding. Search by comments using "CTRL+F" in your editor. Use words like "Name", "Bio", "Social Profiles", "About Me", "Employement", "Education", "My Resume", "Portfolio", "Page Blog", "Contact Info", "Maps" and more. The "Quick Guide" section help you to understand how create pages!

## 3rd Step: Insert your media
Includind your own images and videos.

You need replace all images from some folders inside "img/" (favicon, portfolio, posts and profile) to your own images. Now, select your youtube or vimeo videos and replace the "href" attribute of example. If you rename some media, remeber to rename on "index.html" too.

## 4th Step: Publish your vCard
Are you ready? Go!!!

Now, your site is ready! Before send to host, we recommended that you make tests to check code errors or some other errors. Verify all your informations and if is possible, test on your mobile. If it's ok, you can make upload for a online host. Congratulations!

# Good Bye!

Once again, thanks for purchase this theme. Any doubts contact us. Please, don't forget to rate us.
